D. Sir Me have been applied to they a party owning a fratest on a machine for scraping mutal) to build machines for scraping mutal It is a machine which has been throughly testet, and is mow in use in all the Braf mill in this place, they have long wanted something of the line but have men found any thing to answer the fruston fully with they got this machine, one of which they say with our mean will do the world of eight men - we with you thinking it might be a desirable thing to have at the mint It is for scraping metal after it has been rolled some The machine will take room on the floor 3 + 10 feet. The cost of the machine started in perfect running order is \$1.400# should que think enough of the mutter to send on a man to see the muchine work we would cheerfully show a number of them at work in this place. U. S. GOVERNMENT PRINTING OFFICE: 1933 2-16172

1

Mint of the United States.

Shiladelphia, June 29 1857.

Vi.

has a large amount of him deposits towned from the Apar office are much debated by other metals, producing britteness in the ingots and tequine Councidenable expense byind what is ordinarily incurred in ordinarily incurred in ordinary for Comaço. Indo where place of the Character chance to got into one good ogramulations it cause speak inconvenience and waste of time and materials.

dearn that more than 26,000 cames of him of the wind has been trained from the office, for the long heming of which the change has been omitted to as made to be head of the change for targhening in made to the deporters on not. The work has been done here at the expense of the mint.

John to se quest, y not already done lend:

fore that the change of 3 of a cent her orunce

for langhening be unihosed in accordance with The

untractions healops from to pure office.

The hope also to cale from allation of condenient the motal can be laytoned in the spen office, his if your other opration, sender their will readily hermit the vaclere to two Coughern I at the offers office & secumend that it here done done there here if preferred. n-is from also that I thened Call from allentien to me 14th Leiting eften general mind whom brevides Mat, bullion to base as to Co imputable for Courage may be rejectiol ! It Leener decirable that any Counderable quantity of melat which begins toryhening thould as Lecurio either at the muit on at the spay office.

Tam Butterworth E. Super Assay Opin MM. Respecting delased aspirits from that office Y Sune 30, 185-7.

Dir, I have to call your attention to the fact that a large amount of Silver deposits received from the Assay office are much debased by other metals, producing bitleness. en the nigoto and require considerable expense beyond what admarily incurred in order to render the ingots longh suitable for comage. And when Silver of this character chances to get into our gold granulationed it causes great inconsenience and waste of time and materials. I learn that more than 26,000 ounces of Siever of this kind has been received from the Assay Office: I am not advised whether on the receipt of this bullion the charge for toughening was made to the depositor or not. The work has been done here at the Expense of the Mint. I have to request, if not already done heretofore, that the charge of & of a cent per ounce for longhening be imposed in accordance with the general instructions heritofre givento your office. If your other operational will readily parmit the metal to be toughwed at the assay office I recommend that it be done or its may be elone here of preferred. It is soperals a that I should easy you

attention to the 14th Section of the Jenual Mint law which provides that bullion so base as lobe unshita. for comage may be rejected.

It Seems stor desirable that any emside able quantity of merce which requires longhening Showed be received with at the ellist or at the existing of the existing Officer Same Rop Inounce Director of the Strut. Sam. F. Bretterworth Esq.
Superinterdent Ale S. etting Ther.

7, 8

may add that the parcels in many cases have been analyzed, and show that the remainder of the alloy is copper, with traces of some other metals and metallic oxides, as is always to be expected.

J. P. Edsfelou Assaya

M13 I mish a suggestion from you, as to whether my future Reports shall be made quarterly, monthly, or weekly. I bles whether it is necessary to make any other report whom clipping-remelts, than to state that they are such; all my trials prove that they correspond essentially mith original melts. I use the precaution, however, of reserving samples, for any examination that may be found necessary.

From The Assayon of the Mint

Report on Assay of Cent Sugoto.

July 2, 185-)

Do the spayer of the mint.

Gem deport og the 30th alt; on the fresportion og nicket in the cent ingets, own blaced on very table to-deer.

Heragen you will Alaso to make

the asport monthly.

The does not Learn recopery that you depend thoused antrace the cliffing-servelle, y you are satisfican that they correspond with the original melle.

The presention you late of presenting tamples of the servelle in judicious and propers.

Formy Sec. of the Treasury washington Reed June 10/57

Marlestown Massachusetts June 8th 1857 J. H. Inowden Esq. Dear Ger The average receipt of Cents of the old coinage at Charles Never and Warren Bridges amount to about Three hundred dollars (\$ 300) per week. Our practise has been to sell cents at a discount in order to reduce the accumulation which it is impossible to do at the standard value. My purpose in addressing you is to learn if there is any (see Art. 5 Motice of Director of the Ment) Assistant Freasurer, Depositary, or other officer of the United States, resident in Boston Massachusetts who has charge of the business of making exchanges of the new cent. Thould there be no such of--ficed (above mentioned) I desire to learn whether you would receive from us packages of cents containing Fifty (\$ 50.) dollars by count 1 At. 2 Motice from Director of the Mint - Copper Coins thus offered must be in even sums of Five (\$ 5.) dollars by count) as the cost of packing and transportation in sums of five dollars would materially increase the expense. You will oblige me if you would furnish me with general information, whether you receive cents which have been "clipped" if you pay any part of the expense of transportation to Phil--adelphia and other knowledge thereto relating which you think will be of service. 10 espectfully yours, Benjamen F. Tyler for J. J. Memick. Agent for Charles Dever and Warren Bridges.

Your letters of the belight inst. to the Iradurer of the minteneles ing a draft in favor of the asst. Quad at new Sort for 15000. and one in favor of the asst. Iread at New John payable in new cente, have been placed in my hands.

The demand for the new wint is so great that it is necessary we should oracinly confine their if we to the retiring from circulation of the old saffer cents, and the fractions of the Spanish and merican dollars; and to exhibit to you the magnitude of the with before as, namely, the amount of new cents which will be required to effect this datable object, I present the following statement and estimated:

There have been wished about 160,000,000. of Cente (0,8.) 1,600,000.

Irobably one fruith only of this amount will be presented fit exchange,

any 10,000,000. Spices been one. I estimate that about son,000.

In Thanwish I mexican Coind will abdo be predented for exchange, and

it will thus be seen that our coinage of the new cento to meet thick exchange,

will be about as follows:

In exchange fet the Spanish Mexican ains 30, and, one offices being a total of 90,000,000. Species being a total of 90,000,000. Species but with some improvements in suggest of earls daed not exceed 3,600,000. Species but with some improvements in suggest of two years will be required to make the exchange in question. Itener you will observe the impoleous of saying out the new earl in any considerable quantities in exchange for the gold and

The isue of an undue quantity of the new eents, because the disordied coins mentioned will certainly come to the mint for exchange, and if in addition to that, a large amount, we also exchanged for the gold & silver coins of the add there would be too large a circulation of the new cents after the lapte of two or more seared.

folion of the government, first to retire the old cente and spanish wind from airculation, and after that is accomplished we array consider the question of exchanging the new cent for our gold and dilver coins. This course, it wiems to me is also proper as a measure of right to the holdens of the deposit all coins. The government has discredited these coins and they are comparatively useless to the holders of them and of mile increase coins the law in busiling limits to person when the spanish and merican coins the law in busiling limits to person when the spanish and merican coins the law in busiling limits to person when the spanish and merican coins the law in busiling limits to person when the securable in exchange of the new cento to two years from the

So these view are societ is made in the new cente to new York squal and there so one precies or; say to the lond, or brown to the new the discreditioners at their points would only pay them out in exchange for the discreditioners at their points would only pay them out in exchange that discreditioners and their sound. But their are doubtless asked for to exchange them for out good and sider coins. If the movement, however, that they should be supplied with and sider coins. If the change to make payments on their affects and sugar, a sufficient amount for change to make payments on their affects and sugar, therefore, that a drapt bread whether is free of the asst, dream at hew york for two therefore, that a drapt bread whether is from other places that drapt should be interested in case of similar applications from other places that drapt should be interested in case of similar applications from other places that drapt should be instanted that they are supplied with the new center only for their sensorement in that they are supplied with the new center only for their sensorement in

heno paymento and not for exchange for ud gold while loind: at the mint we have pursued the course herein indivated, and limited the hay ment of the new cento to exchanges for the spanish and mesi can delie coins and the old conto in accordance with the bit paragraph of the mint avoidar of the eyes of april last. dim come of the . I like I re enclose the Drafto to you, and commend the visit herein presented to your favotable consideration. at have the honertabe, with great respect : Same Rope Inowder Minical of the mint. Gen. a towell fall. Lecretary of the Treasury: Officers of the mint in cahoe judgment I have confedence, and they can adi a have made a low estimate of the amount of Spanish & mexican better Coins and old cent which will come to the mint proceshange. Sadher

Officiers of the mint in eahore prolyment & have confeitine, and they con add a have made a low estimate of the amount of fanch & merican below loving and old cent which will come to the mint for exchange. Such in honover to the estimated of have given a of they are too low, it thoughtened the oficient of have especially and condend it the more new fory that we should not evaluate the many that we should not evaluate the mind of the mero aonto, at any point, for the gold and selver amin of the United States.

To Jacob Be Celepledthe Assayon W. S. ethins

Desiring his opinion on bestami points connected with depoit in ells Starasthys accounts

July 16, 1837,

In the dollement of the accounts of the late Melter & Refine of the branch mint at Van Rancisco a large deficiency has been a Ventained to Exist in the amount of bullion received and returned by that Office beyond the amount of Hastage allowed by law. The July that been referred to me by the Soulary of the Frenowny and being de siron or of availing myself of your Knowledge and experience on questions of the character of place herewith in your handes for your examination are the reports, toolinony and papers which have reached me relating toits and have to request a report thereon as your eartist convenience. In addition to your general views I would be glad to have your opinion on the faceowing points. I louen do large un amount of the principes onusaes be wasted in the operations of meetings refining, and making ingolo!

2. I lease state your opinion as to the cause of so extraordinary a wastage or deficit. 3. Could it be caused by the volatilization of the precion metals and their escape by the flues and bhimney. 4. Whether so large an amount and stated can be regarded and necessary waste in the operations of the meeting and refining department. want of Skill or integrity on the part of the Office. in charge of the work. As before Stated I have also to ask your general views of the question Submitted to Ine, with a notice of Such further points, than these herein Specially mentioned which you may think newfor and proper showed be bought to my atoution. Obery Resepentfully, your Obedient showard Same Rep enouden Director of the Min Jacob. R. Celefreat ly.
Assayer,
Mintry the M. Sland.

- Do you consider the bank absolutely solvent both in having collectible assets sufficient to pay depositors and other creditors and in its ability to meet maturing and the usual demands in the ordinary course?
- If the bank is in weakened or extended condition, did you ascertain as to the possible sources of aid from shareholding interests or other connections and confer with directors about obtaining such aid?
- Was a meeting had with the board of directors and all matters subject to criticism considered with them? Give names of directors and officers with whom you discussed conditions.
- Did you leave a letter as instructed for the directors to sign?
- What powers, if any, has the bank been authorized to exercise under Section 11k of the Federal Reserve Act? If any exercised, submit report on Form 1425-D-E-F.

GENERAL REMARKS.

(Include here criticisms and reasons therefor which the examiner does not deem advisable to state in the report proper.)

Examiner.
Chief Examiner.

To the COMPTROLLER OF THE CURRENCY,

Washington, D. C.

addressed to this office by the directors.

Note 2.—Copies of all important letters written by this office to the bank will be forwarded to the examiner, who should see that the originals note 2.—Copies of all important letters written by this office to the bank will be forwarded to the examiner, who should see that the originals and the bank's reply are noted on the minutes, where all directors will have the opportunity of being cognizant of them.

NOTE 1.—The examiner should discuss all unsatisfactory conditions with the directors, if possible, and minor matters with officers, and endeavor to have them corrected while he is in the bank, or obtain definite promises which, if sufficiently important, should be set out in a letter and endeavor to this office by the directors.

Mint Corresponaence with Lord Monteagle in relation 18 De crima Comage System. July 30, 1887

Lopey

Questions proposed

ly Lord over stone

in alatin to the

Decimal Comage System + my replies

Thereto. -

Which to Sept mile the season of me.

ance Sate min

hertesting the war of come depresenting the parts Alint of the United States, Philadelphia, Puly 28 1857. a decimal typhing comage and accord to I have the honor to acknowledge the 20° ceift of your favor of the IIth of April last. No of State, where Lord Napier to whose care it was addressed - had placed it. Sam gratified to learn that my former Communications were eatisfactory on the points presented to my Consideration; and I take bleasure in making the further Lerfonser which you desire. It was my first intention to bresent a general veries of the Judget, but on puther Coundenation I deemed it to les mono Latin face long to deply to each of the intensegolaries prepared by jun Colleague, Lord Overstone. These deplies I herewith unclose. By referring to my answer to the 23 meny you will see that the higgertion you theat of

Lesheding the use of Com representing the paction: al parti of the dollar is inaccurates. There Com meno in general use by our proplo before the act of Congress of 1792 was haped establishing a decimal tystem of Comage and accounts, They thus preceded the decimal Comago; and untrado of Ceny seganded as aids to that as a traggested, they have been serious hundrances to it. Chestel a very recent heriad these binary Come entered largely outs ou Circulation. This was accasioned hartly because the public were accustomed to them use and herting accourse antit the Jens 1853 the ment ifwed but few Cours of the Conalles denominations - except the 3 centi firece, the spring of white were Commenced in 1851. One of the principal objects agthe de cent act of Congress to which you defend (act of Heb. 21, 1854) were to seture pour cerculation these factional Cours which . They interfered with our decimal system. The law also provides for the spir of a new cout of less weight - Cowposed of Copper and

nickels - and of leelter general appraviance than the Cumbrous Copper Cent desitation spready! and it sepial all laws herstofens hafsed making foreign Com a legal tender in payment of uni the following from the last of stoods and In conclusion I beg to semant that This general scope of Lord Overstone's inguiries Leens to evince an inclination to call in question the propriety of a decimal arithmetic. s as well as a decimal Comage. But surely no as gument is recepang to how the advantages of decimal over Compound as Montre. In my early jouth I well demember, when Computing sum in Compound anthintie, how delighted I was when the Philling, and home, or owners, tennywights and grains

how dilighted I wan when the Philling, and prains here. or owners, temporally and grains were dishored of and the hounds were made by teached in which the advance was made by tem. I propose wary ones exponence is of like character. Custom however and easy, propositions of the wise difficult. On this privagle Lord Overstone Lough. " we at once know that the half of

8 97.8. Ed is 38 9d. The decimalist may well ask I how we at once know this? Certainly one un = wastised with shillings and funce in compelled I de make a Calculation to seaso that Result invol: 33 ming the following figures: the dalf of y is 3 and I one semaning, and as 1 Thilling Contains 12 Thence, add 6 to 12 which is equal to 18. The shalf of which is 9; therefore the half of 33 37 Shillings and 6 pences is 3 Shillings and 3 3 shalf of 90 in 45, on the half of 100, in 50.5 303 Long selected cases which present ad: So stages of Compound anthrono our decimal soft santhroether are illusory; and, y more headily 33 Calculated, it is the secoult of Custome and I habit, and don not arise pure any advantages hopefred by the ferme tystem own the latter. The being baluable and useful nemonandem?

The being baluable and useful nemonandem?

The best by Jens Lordolife for the use of the decimal Comage Commissioners X I have the hands to be Lord Monteaglo with the highest serpent,

" scale admitting of more than one bisection, " which was the case with those previously in use, " and it may well be doubted whether the loss in " this respect was not more than a compensation " for every other gain." Must we admit the weight of this authority on the conclusion to which it leads?

IV.

other cases?

"The earliest and most venerable of historical " speculative theory, prove that decimal arith-" metic, as founded in nature, is peculiarly appli-" cable to the standard units of weights and " measures, but not to their subdivisions or " fractional parts, nor to the objects of admea-" surement or weights."—QUINCY ADAMS Report to Senate of United States, 1821, p. 16.

34. Is it not the fact that in all matters of abstract These facts are true, and they show that a duodesimal motation number and multiplication of material things there would have better conformed to the wasts of man than the appears to be a general instinctive tendency to decimal. But as the latter has been adopted it seems on an adopt the Decimal system, whilst in dealing with material subdivision, whether in length, capacity, the that the intrusion of duodecimal binary or other or weight, there is an equally strong tendency to scales, it seems convenient in themselves much factor and adopt the Binary system,—the Decimal system in sequent in relation to the established with metic.—But hap arithmetical calculation, the Binary system in sequent in relation to the established with motation or numer weights and measures, and the retail transactions of the market arising out of them? Are not all the integers of our Weights and Measures multi-tend for ten as that in which twelve should be substituted by the Binary scale? It most a supplied decimally, but divided by the Binary scale? It most a supplied to the state of the market arising out of them? Are not all the supplied decimally, but divided by the Binary scale? It most a supplied to the supp plied decimally, but divided by the Binary scale? Under such a notation 10 would stand Do we not speak of ten yards, a hundred yards, a thousand yards? But when we come to subdivide would be 6; 1/3 of it, 4; 1/4 of it, 3; 1/6 th of it yard, do we not think and speak of half a the advantages of divisibility, without yard, quarter of a yard, &c., and similarly in all this system a superiority over the decimal, in which ten (selected astheterm of repeating the unit) is only " records extant, in perfect coincidence with visible by 2 and 5 without remainders.

35. Is it not then natural and convenient that our Integer of money, the $\mathscr E$ sterling, should be similarly treated? That whilst we speak of ten pounds, one hundred pounds, one thousand pounds, we should subdivide the £ sterling into half a pound, or 10s.; a quarter of a £, or 5s.? And again, that we should subdivide a shilling into half a shilling, or 6d.; a quarter of a shilling, or 3d., and so on?—thus applying Decimal Arithmetic to the standard unit of our Coinage, the £ sterling, but, not to its subdivisions or fractional parts.

Jince we have a decimal notation, such an arrange ment is contradictory and inconvenient.

36. In the Report of the Legislative Assembly of Canada on Decimal Currency (p. 14) is the contowing statement:

"The Decimal Currency admits of but one aliquot "while the second of the secon " and sixpences, perceiving them to be a great
" public convenience. Your committee are of
" opinion that Coins representing the eighth and "sixteenth of a dollar are indispensable in small transactions in Canada, and that the smooth British sixpences will continue to pass extentiatively as the eighth of a dollar unless a better "Coinage is provided."

In a communication from the Rev. Joshua Leavitt (p. 48 of the same Report), this further remark

"I have no doubt of the superiority of the Decimal " system for the purposes of accounts, and am " astonished that other countries have so long " delayed its adoption. Our experience of the delayed its adoption. Our experience of the benefit of our federal currency in this respect is all one way. The saving of time and labour is prodigious, and the advantage in point of correctness and of the facility of detecting errors rectness and of the facility of detecting errors. unquestionable. But for the purposes of small circulation, in marketing, huckstering, and the like, I am persuaded that a Duodecimal Currency like that of England, or like that which

It is conceded that the use of a decimal comage with a non one excite of we the and measures or a non-decimal division of commodities sold tonds to entroduce fractions, not represented by soms. But it is not perceived that any sensible loss or inconbenience to either party can arise on this account, since fraction of a mil, which is aless coin than a farthe cant to be liquidated even if there were them insignificant to be liquidated even of there were the mean of danget. Under the present system unliquidated fractions of the furthing must be very common. And it is inquestioned thick that while the habit of selling commodities in a benary de vision (the 1/2, 1/4, 1/8) instead of by lentho shall obtain, contone since will distate such prices as maybe devided in the twenty the work probably, 48, 12, 16, 20, 24 4 4 miles admitting of the benary division english that is a great multiplicity of cours necessary to meet such such sums. A three mile contoner honding to your 3 centaring in some at the en mile contoner. ponding to our 3 centerin) in connection with the mil and 5,10 and 25 mil coins will admit of a great variety of easy payments: thus 4 mils = 3+1; 8=5+3; 12=10+1+1 or 4 x 3 16=10+5+1 0 10+3+3; 20=10+10; 24=10+10+3+1. And here Imag remark that it is a great mistake to access declinal coins are only such as are obtained by the decimal division of a unit, as, it's tenth, it's hundreth, or it's thousands, Moultiples of such a decimal division of the sent man fairly be included. Thus our 3 cent coin, though neither a decimal nor an even division of the dollar may as fairly be terme nor an even union of in an accimal coins may be called deve a decimal coins such multiples of lower denominations play

" formerly prevailed in the city of New York, is " far preferable. These small transactions of daily life outnumber the transactions of commerce almost infinitely. And it seems impossible to make a Decimal Currency as convenient in these as the old currency. One reason is, that "these as the old currency. One reason is, that
"the Decimal Currency admits of only one
aliquot division, that is, into halves. The
shilling can be divided into halves, quarters,
thirds, sixths, and twelfths, and if it were " needed, a coin of the value of two thirds of a shilling would be found manageable. In all " these countless small transactions which I have " referred to, and in which every man is employed " many times every day, this capability of sub-" division is of great convenience. We are con-"stantly buying a half of a thing, or a quarter, "the eighth, the one third, and so on. If the price is a dollar, we can make the change for " one half, for one quarter, and if one, two, or more pence, with our Decimal Currency; but " we cannot pay the exact price of one third, one "sixth, one eighth, one twelfth, or any other of the fractional parts. If the price is half a "dollar, we can only pay for one half, one fifth, and one tenth. If the price is a quarter of a " dollar, we can pay for no aliquot division " whatever. This is a constant inconvenience, " and can be got along with in no other way than by disregarding small differences."

If a Decimal Coinage be introduced into this country, is there any reason to suppose that the inconveniences here stated as the result of practical experience in the United States will not equally occur in this country?

Will it be possible to obtain the eighth or the sixteenth of a florin, or the quarter of a shilling, or the half of a sixpence, under the proposed Decimal System?

If the small differences, necessarily arising from this imperfect divisibility of the Decimal Coins, must be disregarded, upon whom will the unavoidable loss fall ?

With the tradesman will it not be an accumulating loss, consuming his profits; and will it not be impossible therefore for him to bear it?

Must it not therefore necessarily fall upon the small purchaser?

The principle of the objection is, that the Decimal system substitutes the divisors 2 and 5 for the divisors 2, 3, 4, 8, 12, 16, which are the natural divisors for material things, and are also the

divisors of our present money, giving us the third, fourth, and half parts of everything.

That the effect of this will be, in the sale of broken parcels of commodities, a small money remainder

involving loss to shopkeeper or customer.

This, we see, is a source of constant inconvenience in the United States.

Let us take the descending steps from 8s. 8s., or 400 mils, or 4 florins, is not divisible by

32, the divisor of $\frac{1}{2}$ oz.

4s., or 200 mils, or 2 florins, is not divisible by 16, the divisor of 1 oz.

2s., or 100 mils, or 1 florin, is not divisible by

8, the divisor of 2 oz.

1s., or 50 mils, or $\frac{1}{2}$ -florin, is not divisible by 4, the divisor of $\frac{1}{4}$ lb.

6d., or 25 mils, is not divisible by 2, the divisor of $\frac{1}{2}$ lb.

In each of these cases, in the purchase of a broken quantity of material, ½ oz., 1 oz., ¼ lb., ½ lb., will there not necessarily arise a broken sum of money, which cannot be paid in any Coin, a small "difference which must be disregarded," to the loss of

buyer or seller? buyer or seller?

Mark how under a Decimal Colnage the difficulty occurs in an earlier stage, and in a more serious form, than under the present Coinage, precisely as we descend to the lower amounts, to those which are the usual prevalent prices with the middle and lower classes.

lower classes If it be assumed that, instead of these prices, "com"petition will determine prices in decimals con"veniently divisible by 2, 4, 8, or 16," and therefore in prices not corresponding to the Decimal money of Account; if instead of one shilling, or 50 mils, the price of the unit of the material is taken at 48 mils, is not this in itself an admission that in introducing Decimal money we shall have introduced a money not conveniently adapted to the purposes of the market?

avery servicable partin any system of comage by facilitating change. The great utility of this 3 cent coin with us furnished anexample. Perhaps the most proper series of coins, under a decimal, system, would be that which would best fulfil the condition of paying all decimal amounts with the fewist possible coins. Boins divided by decimal subdivision of the unit well evidently do this in an imperfect manner. He we have pieces to represent only the 10 thand 100 the pieces between the tooth & to will require from one to g coins; from the to the to to the we should need from 1 to 19 from to to from two to eleven 4. to. Intermediato coins will therefore bedemanded in practice, and in the selection we may be quided by convenience alone, subject only to the rule that no piece should indicate fractional parts of the smallest coin adopted in the scale. Thus a series of coins in the following order proceeding from the thousandth of and would probably be found advantageous in reducing to aminimum the number of pieces required to liquidate

Bopper Mickel & Copper Silver 10, 18, 25, 50, 100

And in so doing shall we not have incurred a new set of objections, namely, the inconvenience of being obliged to use several Coins with which to pay the 48 mils, instead of one Coin with which 50 mils may be paid?

37. Again: Mr. Leavitt bears testimony to the admirable qualities of the Decimal Currency for accounts, but asserts that for small circulation and payments in marketing, huckstering, and the like, a Duodecimal Coinage is also wanted and preferable to the other. These small transactions of daily life far outnumber the dealings of commerce. And this statement is sanctioned by the concurrence of the Committee of the Legislative Assembly of Canada. Does not this statement distinctly point to the necessity of not abandoning a Duadecimal System of

Does not this statement distinctly point to the necessity of not abandoning a Duodecimal System of Coinage, but of introducing, if possible, in connection with our present system of Coins, some means by which money transactions may be recorded in a Decimal System of Notation, thus retaining the present system of Coins undisturbed, but combining with it a Decimal System of Reckoning or Account keeping?

"Perhaps it may be found by more protracted and "multiplied experience that the same material "instruments shall be divisible decimally for calculations and accounts; but in any other manner suited to convenience in the shops and markets; that their appropriate legal denomi-

" nations shall be used for computations, and the " trivial (or customary) names for actual weight " and mensuration."—QUINCY ADAMS' Report,

This result may substantially be obtained, in consistency with a decimal system. boins which shall be binary, termary, sexagesimal or decodecimal multiples of the smallest decimal coins would be perfectly congruous with a decimal system of accounts, and would give all necessary convenience of adaptation to the non-decimal scheme of weights and measures.

38. Are not the following the primary requirements of a

good system of Coinage? viz.:—

1st. That the Integer should be divisible into the greatest number of clean fractional parts to correspond with the endless variety of retail transactions which they are to be the means of adjusting:

2nd. That these fractional parts should be expressible in the shortest and most simple form of words, and with the smallest number of figures:

figures:
3rd. That the Coins should be such, both in denomination and relative value, as may pass with the greatest facility in valuing or summing them up when presented in great numbers:

4th. That they should be such as may afford the greatest facility for mental conception, for recollection, and for the ordinary processes of arithmetic which the people are daily called upon to

th. That they should be such as may afford the greatest facility for mental conception, for recollection, and for the ordinary processes of arithmetic which the people are daily called upon to perform mentally in the tumult of the market or shop, and without the opportunity of recording them in writing:

5th. That they should harmonize with the natural tendency of mankind to subdivide commodities for retail purposes by continual halving.

These requirements is 1 \$ 5 are not admitted, as long as we have decimal protation of numbers. The necessary want of harmong with such a system of a cornage possessing these requirements would overbalance any supposed advantage. The other requirements appear to be best obtained by a decimal coinage,

39. Is not the following a just description of the present

In the ultimate subdivision, where the binary division is alone useful, we have two binary steps, viz., two farthings=1 halfpenny, two halfpence =1 penny. In rising to the next unit, the shilling, we have again the factor 2 introduced twice, giving four 2s. besides the number which, next to 2, is most frequently required as a divisor, viz., 3. In rising to the next unit, the £1, we have again the factor 2 introduced twice, giving six 2s. besides the prime number which, next to 2 and 3 and their products, is most frequently required as a divisor viz., 5.

Thus giving the following table of the factors of the number of each of our present units contained in the superior units:—

The coinage expetem of Great Britain is a combination, in one system of the quartenary, the duo decimal and the vigentesimal notations. Practise mag make itendurable but I certainly deem it unscientific, unless our decimal arithmetic shall be conceded to be a failure.

Farthing.	2 × 2	2 ×	02	12	32	×	2	x i	2	×	2	×	2	×	2	×	3	×	2	×	2	×
	Penny.		2	×	2	×	3				2	×	2	×	3	×	2	×	2	×	5	
			2	Shi	Hir	1g								2	×	2	×	5				
	-		1	-		i			-						Po	ош	nd	1				

Does not this system fulfil to a greater degree than any other possible system some of the above requirements? Can this system be justly considered as accidental or unscientific?

There must have been some valid reason for the adoption and long retention of our present peculiar system of Coins instead of the obvious plan of making the progression of Coins correspond to the progression of figures according to our Arabic

What is that reason? Is it to be found in the above explanation, and in the varied and infinite divisibility of the Integer obtained through this system?

40. Does it not necessarily follow that a System of Coinage based upon a Binary or Duodecimal scale must answer these requirements more completely than a Decimal Coinage, seeing that 12 is divisible by more factors than 10, and that the quotients of such division are again more divisible under the present than undera Decimal system? And does not our present Coinage afford peculiar facilities for continued division into clean fractional parts?

41. If in place of our present division of the £ sterling, a Decimal division be substituted, shall we not in many cases lose the power of obtaining an exact result?

What is the 3rd, the 6th, the 12th, or the 16th part of a £ sterling under decimal division of the

Under our present system it is exactly 6s. 8d., 3s. 4d., 1s. 8d., 1s. 3d.

Again, what is the 3rd, 6th, 12th, and 16th part of a shilling in decimal coinage?

Under our present system it is exactly 4d., 2d., 1d., 3 farthings.

for an indication of onyviews applicable to these

V.

42. If it be admitted that for all ordinary retail transactions, for the purposes generally of paying and receiving, our present Coinage is satisfactory, whilst the inconvenience is found to arise when we come to processes of Account-keeping and Calculation, does it not follow that our present Coins ought if possible to be retained without any change, that some Decimal system of recording the should decimalize our Accounts, retaining our present Coinage in all respects unchanged?—See No. 37. various sums should be introduced, and that we

If the present coins of Great Britian could be retained in connection with the decimalization of accounts it would certainly prove advantageous in preventing that conflict with established prices which would to some extent take place under any other plan. See the reply to query he 12.

£	8.	d.		Pence.		Mils.
1	0	0	=	240	=	1,000
0	6	8	=	80	=	333.333
0	5	0	=	60	=	250
0	3	4	=	40	=	166.666
0	2	6	=	30	=	125
0	1	3	=	15	=	62.5
1	18	9		465		1,937 · 499

43. How far will this be accomplished by writing down all money values in the number of pence of which they consist, ex. gr.:

\$\mathbb{L}\$ s. d. Pence.

1 0 0 = 240 = 1,000

The unit, the Penny, would certainly be inconveniently to the unit, the Penny, would certainly be inconveniently.

QUESTIONS

Drawn up with the view of bringing under distinct Notice and Examination some of the Advantages of our present System of Coinage, and some of the principal Objections and Difficulties which have been suggested with respect to the proposed introduction of the Decimal Principle.

They are to be understood as intended to promote a thorough and effectual investigation of the validity or invalidity of the arguments submitted by the opponents of the proposed change; and they are not be taken as intimating any conclusive opinion on the points referred to.

- "The best opportunity is thus (by written memoranda), afforded for
- " a mature consideration of statements made and of arguments adduced in support of (or in opposition to) measures proposed for consideration,
- " and the most effectual precaution taken against misconstruction and
- " hasty inconsiderate decision."-Peel Memoirs, vol. II. p. 99.

I

 Do you think any change in our present system of Coins desirable? A change in the system of coins of Great Diction is desirable desirables

2. On what grounds does your objection to our present system of Coins rest?

The main objection to them is that they do not represent values in conformity to the december notation of numbers.

3. Do you consider them as defective or inconvenient for any of the purposes of Retail transactions, i. c. for paying or receiving? Or is your objection restricted to the inconvenience of our present Coinage for the purposes of Account keeping and Calculation? They are objectionable in both particulars A system defective for the purposes of account keeping calculation, must also be so for purposes of relail transactions, i.e. for recurring and paying, sonce such relail transactions, if analysed, twooling calculations of the same nature as are required in account keeping, very, the months account subtraction, multiple cation and division of values, represented in money.

4. What do you consider to be the primary purpose of Coins? Do you consider them as fractional subdivisions of the integer created for the purpose of adjusting Retail payments? or do you consider their primary character to be that of Instruments the purpose of which is to facilitate Accounts and Calculation?

Both objects are indispensably necessary and it is difficult to conceune that either could be Lacrificed. A eyelem of Coins compiled to adjust relast payments would be an unendurable evil; while it is possible to conduct ownmercial transactions with enstruments voy inconvenient for purposes of times with enstruments voy inconvenient for purposes of accounts and calculations The first purpose, might there accounts and calculations of the first purpose, might there speed to consider a primary. Offertheless, we should only be satisfied with a system combining both the advantages indicated in this query.

5. If one of those purposes must to some extent be sacrificed or made subordinate to the or r, which do you think is entitled to the prior in our estimation?

wee the foregoing anewer

6. Is not the Coinage chiefly concerned in the process of buying and selling by Retail? and must not the question of the merit or demerit of any system of Coinage be decided by its fitness or unfitness for adjusting with readiness and simplicity the multiplied variety of small payments? Are you aware of any complaint against our present system of

Coins in this respect?

Is not the consideration of primary importance the use of the Coinage, that is, the fitness of the Coins to perform their proper purpose of facilitating the division and distribution of Commodities in the Retail markets, and adjusting the small payments which arise, rather than the improvement of a system of Account keeping, by which the convenience of the affluent and educated classes, of those who keep large and extensive accounts, may be principally promoted?

The answer to the 3th query furnishes the basis of a reply to this question. All transactions of commonce are matters of account. They do not love their character by being exclusively montal, or conneconded, as is the case in retail dealings. And as tong as over eyetern of anthrmetic, in the notation of numbers, is december, it may be anticipated that contradictory systems, whether in the notation of values, weights, or measured will be found courses of constant inconvenience in arithmetical reckonings.

7. Do you recommend the introduction of the Decimal principle into our Coinage?

Mes.

- 8. Is it not impossible under the Decimal system to break the Integer into as many clear fractional parts as we now obtain under our present system of Coins? Do you not consider that this is an objection to the Decimal system?
- 9. In an old but very remarkable treatise on Coin and Coinage (Vaughan, 1675) this passage occurs:—

 " Of all the numbers, Twelve is the most proper
 " for Money, being the most clear from fractions
 " and confusion of Account, which ought not to
 " be prejugated by recent that of all other news be neglected, by reason that of all other num-bers it is most divisible, being divisible into units as all numbers are; into two parts as no odd number is; into three parts as no even

"odd number is; into three parts as no even
"number is but six, and the numbers that con"sist of sixes; into fourths, into which six is
"not divisible; and into sixths."

In the memoir dictated by Napoleon at St. Helena,
on the new French system is this passage:—

"On avait préféré le diviseur 12 au diviseur 10,

"parceque 10 n'a que deux facteurs 2 et 5, et

"que 12 en a quatre, savoir, 2, 3, 4, et 6. Il est
"vrai que la numération décimale, généralisée
" et exclusivement adaptée au mètre comme
"unité, donne des facilités aux astronomes et
"aux calculateurs: mais ces ayantages sont aux calculateurs; mais ces avantages sont loin de compenser l'inconvénient de rendre la pensée plus difficile. Le premier caractère de toute méthode doit être d'aider la concep-tion et l'imagination, faciliter la mémoire, et

"donner plus de puissance à la pensée."
What validity is there in these considerations as objections to the introduction of a Decimal system of Coinage? Or, in what does the fallacy of them

- 10. Must there not be an inferiority as regards fractional divisibility in any Decimal system of coins, as compared with a Coinage founded on a combination of the Binary with the Duodecimal scale?
- 11. Is there not great force and truth in the remark of Napoleon, that a Decimal system of dividing the Integer and of expressing the fractional parts, must be less favourable to distinctness of conception, to facility of recollection, and to readiness and ease in mental calculation, than a Binary or than our present system?
- 12. Ex. gr.: Which is the more easy for Conception, for

00	onec	61011,	or ior 1	addition	menta	llv ?—
	7	6		Mils.		Pence.
			=	375	=	90
	2	6	=	125	=	30
	1	3	=	62	=	15
	0	9	=	37	=	9
	12	0		599		144

Again; we at once know that the half of 7s. 6d. is 3s. 9d., but what is the half of 375 mils?

The half of 2s. 6d. is 1s. 3d., but what is the half of 2s. 6d. estimated decimally, i.e., 125 mils, &c. &c. 1

half of 2s. 6d. estimated decimally, i.e., 120 mins, &c. &c. ?

Take another case. Any number of yards—7, 8, or 9 yards at 1s., 1s. 6d., or 2s. 6d. per yard, or the same number of yards at 50 mils, 75 mils, and 125 mils per yard:

Which calculation will be made with the greater readiness and accuracy, mentally and in the open market?

Take half-a-crown—double it—treble it—halve it-divide it by 3-and add all these products together. Is not this easily done by any common This impossible it we regard the decimal intermediate incide the sample multiples as apple meaning but not 20 if we take the sample multiples as apple cable to it. I consider the force of this objection to apply to the character notation of mumbers, in which we peckoney limits up to ten te. The may assume that this plan of notation is runterable; and if so the conclusion second to follow inesistibly that the same system of notation should be extended to the representation of whatever other objects may be noted numerically, whether values wights or measures.

The commendations quoted here appear to have weight as showing the superiorety of a duodecimal system of numeration. The fallacy of applying themas objections to the introduction of a descende coinal appears promos a decimal trithmetic; and whatever, may be the convictions of its imperfection, it is not recovery proposed to substitute the a duodecimal arithmetic. Such being the case, any colored appearant arithmetic. Such being the case, and related expetency no notation whether two accountable, recommendations it may have separately considered must be radically defective from the incongruity with the recewed or decimal system of motation. the received, or decimal system of notation.

There is this inquinity; but the same interiority is to be found in the decimal system of notation of all things as well as loins, lines we submit to the inconvenience in the infinite variety of other authmetical Calculations it will be but a trifling addition to include the Coins in the same system; especially as such inconvenience is ineignificant when compared with the advantages derivable from the Change

Theremark de vapoleon would be true if we had a binary anth-metic, but a sour arithmetic, or notation of numbers, is definal the same mode of noting coins or values must be most fa-vorable to distinctiness of conception, to facility of recollection, and to readiness and ease in mental calculation."

There no doubt that in the United States every one of the examples that led could be more peadily worked in the december of the examination that on in the compound notation of donot include with the latter the statements of values in pence, because these are in fact decemberly noted. A monetary evetim beginning with the pinny conding the pound sterling or geoting it in pence only and asa decimal system. The examples of this characteristic the query of a. s. d. They therefore furnish no ground a objection to account to yet in the examples power show the interpretation account the present trular decimal protein which proposes to divide the found that the from that any unformable informations of the account to remark your their any unformable informace in proposes to the latter plan drawn that any unformable informace in proposes to the latter plan drawn the have any the assume that the process of the articles maned the prices with the same object to confur to the articles maned the prices with the same object to confur to the articles maned the prices with the same object to confur to the nearly the pround of the candle of a cample meghin whom at the matter the present frice at 46 mile the found and 532 the fore. I must be conceased however the difficulty of naming established proposed new system of pounds and miles is a found objection to Thave no doubt that in the United States every one of the exam

person, in his head, without pen and ink or pencil, and in the midst of confusion?

But try the same process upon the same sum in Decimal notation, namely, as 125 mils. Will the calculation be equally simple and easy?

Now try it in pence, namely, as 30 pence. Is it not obvious that the calculation again becomes

perfectly simple and easy?

Again: Price's Patent Candles are advertised in 12lb. boxes at 11 shillings each. Every one knows that this gives 11d. per lb. for the candles. But what will be the calculation taken decimally 2 12lb. boxes at 5.50 mils each; how much per lb.? Again:

1 yard or lb. = $\begin{pmatrix} s & d & \text{Pence.} \\ 2 & 6 & = 30 \end{pmatrix}$ = $\begin{pmatrix} \text{Mils.} \\ 124 \end{pmatrix}$, for more easy calculation than 125

making the necessary payments.

2s. 6d. is paid with one Coin. How many Coins

will be required to pay 124 mils?

1s. 3d. is paid with two Coins.

Coins will be required to pay 62 mils? How many

Is it not by cases of this kind that the relative convenience of different systems of Coinage must be

13. The defectiveness of any system founded on the Decimal principle consists in the imperfect divisi-bility of its Integers.

Is not the construction of Coinage necessarily a divi-sional process? Is it not the metrical subdivision or the Integer for fractional payments in connection

with retail transactions?

"While decimal arithmetic for the purposes of computation shoots spontaneously from the nature of man and things, it is not equally adapted to the numeration, the multiplication, " or the division of material substances."— J. QUINCY ADAMS, Secretary of State. Report to Senate of United States, 1821, p. 8.

that plan of reform. It elemo in fact the only objection. But the weight after it is greatly overbarne by the on any lownto trailing advantages which must altered any live comal system. Without been awardendood as to precessing any subject of ace page to me if this plan, on which the friends of a decomal coinage in Great British stem generally a prece, showed fail many such grown do. Any decimal putter is greatly referreble to a nondecimal one. But it may be well to consider that the for a the objection, above referred to, namely, the difficulty of corroting precess precess into the pound and once leaveney, does not apply to that account to a new which beginning with the penny for help penny would account to a new unit of 100 pence farely place. The princip would accond to a new unit of 100 pence fatalf place . The and indeed only objection that occurs to me to the adoption of this plan and endeed only objection that occurs to me to the adoption of this plan of deriving a pour unit from a Centerimal multiple of one of the minor recognized coins, is, that it neguines the sacrifice of the pound steeling of Lord Nonteagles are client "Memorandum prepared for the Decrimal longue Commerciones," as well as from the sources that he pound steeling is the unit to which the people of England from back however the found in the pound and most attached. It is to be considered thousand that which the promposed the decrarded which is also a unit of accounts in all minors the mead the decrarded which is also a unit of accounts in all minors the meadle the stiss weeks the fearing and for he per a line of the long and suche the chemical and member as the pound steeling attached. It is true do the cond pound and mil system, the pennymus we asserted which is also a unit of accounter in all memor hance actions and perhaps in as large a number as the powerd stating treets. It is breaded the wait of hillibrate classes, which the present is the winty the better ducated with december gives of the one of the other of these decembers unit, may it not be wiser to elect that plane which will them in burden of the change upon the ducated classes wherean better appeared it that the advantages of it, rather than upon the unlearned by whem it containly will be meanned what and opposed. Again it must be considered that the pound and mil system justices the readjustment of all pieces under the pound mil system justices the readpustment of all pieces under the preend six persone and too he here of one and too pence for one ducated or of he pence and 100 her hence in one and 100 here wild involve no change of precessivations. It would require only the mortal conception of the measure of this believed would not be difficult, in as much as it is 100 of the units of two believed will not be difficult, in as much as it is 100 of the units of two stieved will not an of the former queries (quoted number to 30 the present review) for my views formerly hinted on this subject.

Coins as well as by divisions of the larger Coin The 3 cent piece of the United States - a most useful coin - is an example.

14. In the following table compare the three systems, the present, the mil, and the penny system. With which does the superiority rest as regards,—

1. Number of figures used?

2. Conciseness of expression in words or in writing?

3. Facility for mental conception of the sum stated?

4. Tendency to promote accuracy in copying or calling over? 5. Facility for calculations, especially those which

must be made in the head? 6. Interchangeability at equivalent value with the Coins now in use?

£ Mils. Pence. 8. d. 240 1.000 0 0 212 883 17 = 186 775 = 15 6 487 117 9 9 = 312 6 3 = 75 = 67 279 5 7 241 = 58 = 183 = 44 3 8 28 112 2 4 17 70 5 1 4,342 1.044 7 0 28 figures. 34 figures. 27 figures.

To a person familiar with the present British Explem the first column would probably best fill all the conditions; even facility of mental conception (cres) as a matter of course attacher to that pystem to which one is account med. But to an Americanthe statement in pencess most satisfection in all particulars, including facility of mintal calculation, since, estimating the penny at 2 cents, a doubling of the amount gives the value, hearly, in dollars and cents. If we now proceed to subject these total sums to division, which system will be found the most convenient?

convenient?

4l. 7s., divided by 3, 4, 6, and 12, gives the respective sums, 1l. 9s., 1l. 1s. 9d., 14s. 6d., 7s. 3d.

Pence 1,044, divided by 3, 4, 6, and 12, gives the respective sums of 348 pence, 261 pence,

174 pence, 87 pence.

But 4,342 mils is not divisible without a remainder by any of these divisors.

15

		s. d.	1	Pence.		Mils.
1 £	=	20 0	=	240	=	1,000
1 £	=	10 0	=	120	=	500
i.£	=	6 8	=	80	=	_
1 2	=	5 0	=	60	=	250
10	=	4 0	=	48	=	200
\$ £ £ £ £ £ £ £ £	=	3 4	=	40	=	200 — 125 —
i £	=	_	=	_	=	_
1 P	=	2 6	=	30	=	125
10	=	_	=	_	=	_
1 £	=	2 0	=	24	=	100
1 2	-	_	=	_	=	_
1 £	=	1 8 - 1 4	11111	20	=	_
I £	-	_	=	-	=	-
1 £	=	_	=	_	=	-
10	=	1 4	==	16	=	_
-1-1-1-1-1-1-1-1-1-0-0	=	1 3	=	15 — —	=	100
10 £	=	_	=	-	=	-
1 0	=	-0	=	-	=	-
1 0	-		=		=	-
£ £ £	-	= 1 0	= = =	12	=	50

By this table it appears that going down as far as the shilling the £ is divisible under our present system, and under the penny system, into eleven distinct aliquot parts; whilst under the mil system, it is divisible only into six aliquot parts

But observe further the subdivisibility of the quotients obtained under the present and the penny system, compared with those obtained under the

mil system.

The \$\frac{1}{4}\$ \mathcal{L}\$ represented by 2s, 6d. or 30 pence, or 120 farthings, is divisible by 2, 3, 4, 5, 6, 8, 10, 12, 15, 20, 24, 30, 40, 60, giving respectively 1s. 3d., 10d., 7\frac{1}{2}d., 6d., ox. \times c.; whilst the same sum represented by 125 mils is divisible only by 5 and 25, giving as the result 25 mils. and 5 mils.

giving as the result 25 mils. and 5 mils. Again: the $\frac{1}{10}$ £, represented by 2s. or 24 pence, or 96 farthings, is divisible by 2, 3, 4, 6, 8, 12, 16, 24, 32, and 48, giving respectively 1s., 8d., 6d., 4d., 3d., 2d., 1\frac{1}{4}d., 1d., \frac{3}{4}d., and \frac{1}{4}d.; whilst the same sum, represented by 100 mils, is not divisible into a third or an aighth part. or apply of their suba third or an eighth part, or any of their sub-

The same may be said again of the shilling, which, divisions. The same may be said again of the shiling, which, represented by 12 pence or 48 farthings, may be divided by 2, 3, 4, 6, 8, 12, 16, 24, giving respectively the sums 6d., 4d., 3d., 2d., 1½d., 1d., ½d., ½d., id., ½d. whilst the same shilling, divided into 50 mils, is divisible only by 2, 5, and 25, giving the sum 25 mils, 5 mils, and 2 mils.

Now let us compare the three systems with reference to the number of figures requisite for stating the fractions of a & which are obtainable under each of the three systems:-

f the three systems
$$\frac{s}{s} \frac{d}{ds}$$
 Pence. $\frac{s}{1000} \frac{d}{ds} = \frac{240}{1000} = \frac{1000}{500} = \frac{500}{500} = \frac{100}{500} = \frac{500}{500} = \frac{100}{500} = \frac{1000}{500} = \frac{10000}{500} = \frac{1000}{500} = \frac{1000}{500} = \frac{1000}{500} = \frac{1000}{500} = \frac$

I consider the notation in pence as a decimal system, and con-sequently, these examples furnishing to decimal coinage per a but only to the plan of pounds and milo. But it recome after all of very little consequence whether the particular faction of a pound indicated can be represented in even mils. If you have the mean Anoting and paying ios the of a pound and long multiple of that amount up to 999. It seems hypercriticion to object that way part of a pound as for example the tothe; cannot be exactly represented in mile. For practical purposes 62 or 63 miles well dehote the a mount which is mathematically 62 times. The prends of a decimal system might respond by asking how too of a poun sterling can be represented in your present currency, As this cannot be done it constitues at least as thong a reposit hagainst the compensation as it is against the militarial plan that the indicate precisely the 15th of a pound.

III.

16. Is the introduction of the Decimal principle into our Coinage desirable without reference to what may be the System of Weights and Measures in this country?

Adecimal monetary system, both of Corrage and accounts, undoubtedly desirable without reference to the eyelem of weight and measures. of the opposite with the most happy result in magnetic for a plant the most happy result in magnetic for a plant the most happy result in magnetic for a plant the most happy result in magnetic for a plant the most happy result in magnetic for a plant the most happy result in magnetic for a plant the most happy result in magnetic for the plant the propose of the market by means of our Weights and Measures, and the practical purpose of Coins is to effect the payment for those Retail purposes. Can the advisor the payment for those Retail purposes. Can the advisor the payment for those Retail purposes. Can the advisor the payment for those Retail purposes. Can the advisor the payment for the Retail purposes. Can the advisor the payment for the Retail purposes. Can the advisor the payment for the retail purpose of the payment for the payme

20. Take the case of an Article now selling at a shilling per pound or per yard, and retailed in halves, quarters, ounces, or inches, these fractional quantities are easily and readily paid for in our present Coins. But if our Coinage be subjected to the Decimal principle of division, will not that facility be lost?

This case affords one of the exceptions referred to But on the other hand suppose an article under the Land mily found free are sold represented from the quarter, the eighth and the ownce are sold represented for 49,20, 10 and 5 mils, whereas at the same price with old eyetem, that is \$ 74, these weights could be noted in money only by the fractions \$5, \$ 4.13, \$ 32, \$ 134.

21. Under our present system,-

Ilb. = one shilling 50 12

½lb. = sixpence 25 6

½ lb. = threepence 12.5 3

½ lb. or 2 ounces = three halfpence 6.25 1½

In cases of this kind, will the ordinary transactions of the market be carried on under a Decimal system with simplicity or convenience comparable to that which is obtained by the present system?

The decimalist may suppose the price, under the pound and mil system to be 48 mils, which would give the advantages of calculation on his side. I fall thengo were sold by the pound and at a shelling, these examples might have everyth; but subjects to be computed on money, and the range of prices are of such variety, that I would be very lineafe to a llow oncell to be swayed by wolded examples selected from practice under the old system. It so some extentive must be quit ded by general and the order views. It mong there I holded not open to any fund exception the view which assumes that, mannuch as our system in finding numbers is decimal and at the basis of arithmetical recknings, every approximation to that system in poting of when their will be found a dvantageous.

22. Would a change from our present to a Decimal system of Notation and of Coins secure any advantages in Brevity of Expression, in Facility of stating Accounts, in Simplicity of form, in Speed or Accuracy of Calculation, or in Facility of payments?

Such a change would seeme a great balance of advantages over the present system it is not doubled. Any plan of accimalization would secure them; but that which askinds from the penny to a new unit of 100 pences or from the ke' penny to the 100 ha pence I seems to be recom mensed by the most advantages, theoretical and practical.

23. In the Report of the discussion, at the Institution of Civil Engineers, of Mr. Yates' Paper on the French system of Measures, Weights, and Coins, the following passage occurs (p. 60):—

"The pound sterling, consisting of 960 farthings, ad"mits of 19 divisions" without a remainder; but
"if divided into 1,000 parts, it only admits of
"8 divisions. Existing Weights and Measures
"are chiefly reckoned by 2, 4, 8, 12, 20, 24, 36,
"&c., which admit of divisions by existing
"monies; but if a monetary decimal system be
"adopted, without also adapting it to weights
"and measures, it must be evident that the
"number of fractions will be greatly multiplied.
"Decimal coins will not accord with the frac"tions of a pound of 16 ounces, nor with those
"of a yard of 36 inches. Purchases of ½, ¼, s,
"1", &c. of any integer could not be paid for

It would be certainly desirable that decimalization of weights and measures should be introduced as well as of coinage, and it must be conceded that the full advantage of the latter will not be manifest until the former has also been effected, to the statement made in the extend the following criticism may be offered, it assumes that weight, and measures are to be divided. But these transactions are small in number compared with those in which they are to be multiplied by the price and in such cases the facility offered by decemal coinage is indisputable. That pactions of a milrot represented by coins of the disection what hackens of a partition are also discourse and why pot those of a mil which is a smaller coins of a contitue discourse that the discourt of preventing losses of fractions of a cent. This outners was incessify of preventing losses of fractions of a cent. This outnesses in existing in existing the lack of the delian for a implience before the adoption of our decime coince age and chepresented prices in the L. d. system. They of the solution of the decimal existem, in the absence of any other small coin the chinh making but title progress in the securion of any other small coin the chinh making but title progress in the securion may to a serious than the cent and half dollar) third franch manifest of any other pieces than the cent and half dollar) third franch manifest was conformed the fraction of small things were conformed of any other pieces than the cent and half dollar) third franch manifest was the prices of small things were conformed on the fractions of small things were conformed the precess than the cent and half dollar) third franch manifest the precess than the cent and half dollar) third franch manifest the supplies were conformed the precess than the cent and half dollar) third franch manifest the supplies were conformed to the small third progress in the cent of any other small conformal the precess than the cent and half dollar) third franch manifest the supplies the supplies the

" decimally without incurring a loss by fractions " not represented by Coins. Now those are prenot represented by Coins. Now those are precisely the quantities in which the working " classes principally make their purchases; con-" sequently they would be the chief sufferers by the introduction of a Decimal Coinage, " unless there is a simultaneous adoption "Decimal Weights and Measures. This anomaly was severely lelt in the United States, and to obviate the inconvenience, Spanish pieces of "obviate the inconvenience, Spanish pieces of "though light and leging, were " 64 and 122 cents, although illegal coins, were " of necessity employed."

Must the truth and force of this statement be admitted, or, if not, what answer can be given to it?

*Qy. 960 admits of 27 divisions, not 19; 1,000 of 15 divisions, not 8.

24. In the retail transactions of the Shop or Market, is not division into halves, quarters, thirds, eighths, twelfths, &c. more convenient, and more in unison with the natural habits of mankind, than the division into tenths?

"The decimal numbers, applied to the French " weights and measures, form one of its highest theoretic excellences. It has, however, been proved by the most decisive experience in France, that they are not adequate to the wants of man in society, and, for all the purposes of retail trade, they have been formally "poses of retail trace, they have been formally abandoned. The convenience of decimal arithmetic is in its nature merely a convenience of calculation; it belongs essentially to the keeping of accounts, but is merely an incident to the transactions of trade. It is applied, "therefore, with unquestionable advantage, "monies of account, as we have done; yet, even in our application of it to the Coins, we where no our application of it to the cours, we have not only found it inadequate but in some respects inconvenient. The divisions of the Spanish dollar, as a Coin, are not only into the tenths, but into halves, quarters, fifths, eighths, interesting and treasitions. We have the "tenths, but into halves, quarters, fiths, eighths,
sixteenths, and twentieths. We have the
halves, quarters, and twentieths, and might
have the fifths, but the eighth makes a fraction
of the cent, and the sixteenth even a fraction
of a mill. These eighthe and sixteenths form a
very considerable proportion of our metallic curerency and although the eighth, dividing the cent
only into halves, adapts itself without inconvenience to the system, the fraction of the "only into halves, adapts itself without inconwenience to the system, the fraction of the
"sixteenth is not so tractable; and in its circulation, as small change, it passes for six cents,
"though its value is six and a quarter, and
"there is a loss by its circulation of four per
"cent. between the buyer and the seller. For
all that transactions of retail trade the circulation all the transactions of retail trade, the eighth and sixteenth of a dollar are among the most useful and convenient of our Coins; and, although we have never coined them ourselves, "we should have felt the want of them, if they had not been supplied to us from the Coinage of Spain."—QUINCY ADAMS'S Report to Senate

25. The late Lord Ashburton, in a debate in the House of Commons on this subject, remarked, "That the "capacity of division by halves and quarters "which attends our shillings is extremely convenient for the common purposes of life, which "upon the whole is the best criterion of any "system." Is this correct or otherwise?

How is the shilling expressed as 50 mile to be

of United States, 1821, p. 81.

"upon the whole is the base through the wind is the shilling expressed as 50 mils to be divided into quarters, or the sixpence expressed as 25 mils to be divided into halves?

26. It is stated by Sir John Herschel, in his evidence before the Committee of the House of Commons, (qu. 594,) that in his opinion "it is a great mis"fortune that decimal coins will never fit the
"fractions of a yard and of pounds and of mea"sures." Must we concur in that opinion, and if

toit. They were not necessary to help the imperfection of the accimal comage since they preceded it And it may be added that within a period of 5 months simply an orther of an act of longues, declaring period of 5 months simply an orther of an act of longues, declaring that hereafter Government officers should necewe them only at 20, what hereafter government officers should necewe them only at 20, and they carry their circulation and a dication of tronal inother cases they have almost entirely desappeared from the currency. Surge amounts of them have been deposited at the Bunt at their value plu ounce in weight and at considerable loss to the holders. Had the proper could not of course have obtained in extinent of these como has taken place although prices in many cases, still continue to conform theret; but in this pasticular also a reform is in progress and There full confidence that but a short period is in progress, and There full confidence that but a short period will clapse before the prices of retailed articles will be quoted as well as liquedated in even cents.

The fact of the easy banishment of the Spanish money with the enter approval of the people proves that M' Adam's had miscon cewed the cause which retained this currency, to the question propounded, it must be conceded that indicated is more natural than into tenths; but the ence to be drawn is that we should have a devodecimal notation of numbers. Since however, we have a decimal notation, and are likely ever to retain it, contradictory scales whether in Cornage, weights or measures should be dispensed with, as incongracious and recessarely inconvenient.

In such cases we, in the United States would note (in accounts) the 1/2 or 14 of the mel. He myreply to no. 36 Aformer queries quoted in Mr. 29 of the present.

It would be desirable that other systems should be decimalived as well as comage, but there seems no necessity that one reform should want upon the other.

so, must we concur in the further view of Sir John Herschel that, "a Decimal System of Weights and "Measures, as well as of Coins, ought to form a part of the same integral system"?

27. In the evidence given before the House of Commons Committee, Sir John Herschel gives his opinion, that the Decimalization of Weights and Measures and of Coins should go hand in hand (qu. 598); but if that be impracticable, he inclines to the opinion that Decimalization of Weights and Measures should be a step towards that of Coinage (gu. 600).

Measures should be a step towards that of Comage (qu. 600).

Professor De Morgan would adopt a Decimal Coinage first, leaving the other (Decimal Weights and Measures) for a future period (qu. 765).

Mr. Airy thinks that the adoption of a Decimal system of Weights and Measures desirable to some extent, and probably concurrent with the Binary. extent, and probably concurrent with the Binary system (qu. 481).

system (qu. 481).

What is the correct view on those points? Is the adoption of a Decimal system of Weights and Measures essential to the efficiency and usefulness of a Decimal Coinage? Ought it to precede, to accompany, or to follow, as a necessary consequence, the introduction of Decimal Coinage?

28. Is it not the fact that, next to addition, the most important operation performed on numbers representing broken sums of money is the finding the price of a broken quantity of material when the price of a given unit of the material is a given broken sum?

broken sum?

Is not this operation in theory the multiplication of a broken quantity of material by a broken sum of money? Is it not usually performed, and with great facility, by the rule denominated "Practice"?

Is it not the fact that one of the great advantages of a completely Decimal system of Money, Weights and Measures would be that such operations would be performed by simple Multiplication? Is it not the fact that this result would not be attained unless weights and measures were deciattained unless weights and measures were deci-malised as well as money?

If money alone were decimalised, would not such operations be still performed by "Practice," and would the operations be much or at all

simplified?

Take, for example, the following case, given by Sir Charles Pasley in his evidence before the Com-mittee of the House of Commons, as showing the advantage of the Decimal system.
215 tons, 17 cwt., 3 qrs., 9 lbs., at £9 11s. 6¼d. a ton

Under the present system 215 tons, 17 cwt., 3 qrs., 9 lbs., Under the present system we should say-

If weights and measures as well as coins were decimalised, the question might be:—Required, the price of 483,597 lbs. at £4.275 per 1,000 lbs., which would be a question of simple Multiplication.

But if only coins were decimalised, then in the pound and mil system we should have 215 tons, 17 cwt.

3 qrs., 9 lbs., at £9.576 per ton, which we should probably work in the following manner:—

100 tons			=	957.600
100 ,,			=	957.600
10 "			=	95.760
5 ,,	=	1	=	47.880
10 cwt.	=	1	=	4.788
5 ,,	=	1	=	2.394
1 "	=	1	=	438.5 478
1 "	=	1	=	478.5 478
2 qrs.	=	+	=	239.25
1 ,,	=	1	=	119625
7 lbs.	=	1	=	031.15625
7	=	1	=	·004·450 % q
1 "	=	1	=	·004·450 q ò
1 "		1		The Alexander

215 tons, 17 cwt., 3 qrs., 9 lbs. = £2067.433

Tee previous answer, and that to query 16.

Worked according to the rule of practice, the solution by the pound and mile system appears the most expeditions and simple. In the U. States such an example would be solved by prest finding the price per pound corresponding to the price by first finding by dividing the price by 2240. The weight sold reduced to pounds, would then be multiplied by the price per pound thus divided. The product would be the ever of the iron.

- Is much or anything gained in this case unless weights and measures as well as coins are decimalised?
- 29. Will not the introduction of a Decimal system of Coins and Accounts necessarily tend to render the present system of Weights and Measures very inconvenient, and thus to force the country into the application of the Decimal principle to Weights and Measures for the side of necessary convergence. and Measures for the sake of necessary correspondence with the Coinage?

"The concurrent use of non-decimal division of " commodities with a Decimal Coinage tends, in " reckoning prices, to a result expressed in a binary fraction of a cent. In such cases, if payment be made, three fourths of a cent is liquidated with a cent; a half-cent is some-" times paid the same way, sometimes not noticed. The quarter cent is not liquidated." In accounts the three quarters, halves, and " fourths of a cent are generally entered, and added in on footing the columns, the total being carried to the cents, a fraction above
half a cent being counted as a cent. It is
believed that no sensible loss to either party
arises in the long run from this practice. Even
in a complete Decimal system of weights,
measures, and coins it would be impossible " to liquidate accurately all reckonings, unless "the least coin were smaller than the public "would andure"—Answer to No. 36 of Circular Queries, by J. Ross SNOWDEN, Director of the Mint of the United States.

The decimal coinage would not render the non-decimal weights of measures more inconvenient, but by the opportun nety it would purnish for a comparison between rational and inational systems it would probably lead to the abandon ment of the latter.

30. A great practical authority, Mr. Slater, has stated that one consequence of the introduction of Decimal Coinage will be, that articles will be made up in parcels of ten each, instead of dozens as at present. Will not this be less convenient for subdivision than the present practice of making up articles in dozens?

The consequence anticipated may not follow, and in the united States it has not, but if it were I do not perceive that any inconvenience would result.

31. Does not the anticipation of the change in this respect afford a practical illustration of the tendency of a Decimal Coinage to force the country into the adoption of Decimal Weights and Measures?

The experience of the United I shows that decimal loinage does not force decimal weights and measures It is certainly to be hoped that it will altimately lead with us, and also in Great Britian, not to an inforced, but a cheerfully accepted system of decimal weights and measures.

32. Is not this an inversion of the natural and proper course? Ought not the country to decide in the course? Ought not the country to decide it the first instance what system is most properly applicable to Weights and Measures, and then proceed to adjust Coinage and Accounts to that system, Coins and Accounts being the means for adjusting and registering the Retail payments which arise out of transactions which have had their origin in Weights and Measures?

I believe that the natural course of proceeding is to do that which is practicable. If the people well existent and and cheerfully accept desermalized own, weights and measures the report should by all means go that length. But if not then decimalize that enter which there is reason to believe they are prepared to adopt.

33. The Select Committee of Parliament of 1821 recommended that the subdivision of Weights and Mea-

Vision of the last state of the introduction of the Erench Metrical System, says, Encycl. Metrop. Art. Arithmetic, p. 448.—"The decimal subdivision " of these measures possessed many advantages on

- " the score of uniformity, and was calculated to " simplify in a very extraordinary degree the
- " Arithmetic of concrete quantities. It was at-" tended, however, by the sacrifice of all the prac-" tical advantages which attend subdivisions by a

The strength of this reasoning and its conclusions are not admitted. The advantages of bisection are more mended that the subdivision of Weights and Measures employed in this country be retained, as being far better adapted to common practical purposes than the Decimal scale. If this recommendation be founded on sound reason, is it not equally applicable to the case of Coinage as it is to Weights and Measures? Is it not fully as true of Coins as it is of Weights and Measures, that the present subdivision of them is well adapted to all common practical purposes?

In this recommendation processes the formula and accumulation are more accordance to obtain the advantages of bi-section the advantages of the continuation of them is well adapted to all common practical purposes?

In the latter, which stands at the base of our system of numbers, See the following answer to No. 37 of the Circular Queries by J. Ross Snowden, Esq.:—

" Q. 37. Add any other statement or information which "you may consider to be of use?—A. The scope of this inquiry may admit of the suggestion, that if the decimalization of the British coinage were " effected by adopting, in place of the pound ster-" ling, a new unit of the value of one hundred of the present divisions of the pound (say 100 " farthings, halfpence, or pence) all prices and coins under the present system would be exactly " measured in the new unit and its parts, which " would also be almost exactly commensurable with the dollar of the United States. A unit of with the dollar of the United States. A unit of
"100 halfpence, for example, which might be called
a dollar, would be equal to \$1.013 of the United
States, an approximation to our unit so close that
the moneys of the two countries, under such a
system, might be deemed substantially identical."

44. Does not every Decimal System of Accounts necessarily consist in taking the lowest Money Unit, and stating in Arabic notation the cumulative amount of that Coin contained in any given This is substantially true.

45. In the £ and mil scheme do we not take the farthing (changed in its value and called a mil) as the basis of the system, and then proceed to state all values in the number of these new farthings contained in that value ?*

In the penny scheme do we not take, in a similar manner, the penny as the basis but without any

change in its value?

In addition to this advantage, will not the state-ment of values by the number of pence contained in them, rather than by the number of farthings or mils, necessarily involve greater conciseness and simplicity of expression, there being only one fourth the number of pence as compared with the

fourth the number of pence as compared was innumber of farthings in any value?

Is it not an advantage in any Decimal System that
it does not necessarily involve the introduction of
a farthing column into all Accounts, seeing that
all sums under a penny are now voluntarily
omitted from a sense of convenience in a very

large proportion of Accounts?
In those cases in which it is found desirable to introduce fractions of the penny, is there not reason to believe, that it will be found more convenient to express those fractions Binarily than in a Decimal form, seeing that such has been the result of

practical experience in the United States?

The Director of the Mint states (qu. 31), "The change "has been effectual as to the use of dollars and "cents, but not of the mil, the fraction of a cent being expressed Binarily."

46. If the Penny be taken as the lowest unit of a Decimal System of Accounts, and if all sums be written down in the number of Pence of which they consist, will not this afford a Decimal System of Accounts which may be used in conjunction with and without involving any disturbance of our existing system of coinage, or changing the character of the & sterling as the great Unit of Account, as the basis of our system of exchange with all the world, and as the great Integer by which all our principal calculations and estimates of property and of obligations are made?

I have already armarked in myreply to Queries 12 4 15 that a system in which accounts shoulabe kept in pence is a decimal system, and have intimated some of the gree why a decimal scheme based on the penny or half penny and from thence deriving a new unit of 100 times such coin, should be at least seriously considered, if it be even entitled to a preference over all others. The pen however, seems too large to be the smallest coin of the scale. The halfpenny which is of the value of the American centris better adapted for the purpose. Binary or pactions of it would then rarely require expression or nayment.

Hitis meant by this that it is proposed to retain the found as a unit and the penny as a penit, I am at a loss to see how a desimal system of accounts can possibly consist with such an intention. The pence would be soutten decimally and the pounds decimally; but the progression flom one coin to the other would be non-decimal. For the old progression of 12 pencemake a shilling, 20 Shillings a pound we substitute 240 kence make a pound, We should have, therefore, when adding values, to use the auxiorard diviser 240 to convert the pence into pounds. Nothing is gained by such a plan as this. Al however, it be meant that the Lis no longer to be express. to be written 2 40 and not £1. the scheme is consistent and decimal. But the inconvenience of having exmall a unit as thepenny for all sume must be manifost; and a derivative unit of 100, (which might be termed a ducat being about the value of that coin) could not he dispensed with

Keeping accounts in farthings reduced 4 per cent. in value, as stated by Dr. Gray (385).
 46.

47. The fractions of a penny would be written as fractions $\frac{1}{2}$, $\frac{1}{4}$, $\frac{3}{4}$. Is this a disadvantage? Is it not the case, that practically in all countries, even in those in which the Decimal System is most in those in which the Decimal System is most completely carried out, the ultimate subdivision of coins is binary? Is not this shown by the fact that in France, Portugal, &c., the 5-centime piece and the 5-rei piece are the lowest coins in general use or generally expressed in accounts? In the United States is not a \(\frac{1}{2} \) cent universally expressed instead of 5 mils? What is the inconvenience of writing such values as fractions? Are they not as easily added in this as in a decimal form, and are they not more easily multiplied?

There is no special disadvantage in writing by vulgar pactions the parts of the smallest coin. To diminish the necessity of expressing fractions at all the smallest coin should not be taken of too great a value, which the penny probably is.

48 This system would not include fractions of the Penny. Is it desirable to incur the inconveniences of the £ and mil scheme, the abolition of our present Copper Coinage, the abandonment especially of the penny, &c., for the purpose of comprehending in a Decimal system of Notation and Account-keeping the fractions of a penny, which under the present system are so seldom required, which, when required can be so easily expressed as fractions, and which are in so many cases voluntarily omitted for the sake of convenience? Lee the previous answer.

0.30

46, it oppears to me that a very practicable mode of derethat public accounts bank notes to, should be sopresed. 49. If the Decimal system is to be tried for the sake of simplicity and convenience in Accountsake of simplicity and convenience in Account-keeping and Calculation, is it not the most prudent and safe course to make the trial of it, in the first instance at least, as a system of Account only, without disturbing the Coinage? How far would this be accomplished by simply authorizing the expression of all sums of money in

How far would this be accomplished by simply authorizing the expression of all sums of money in the number of pence of which they consist?

the number of pence of which they consist?

thous of the counts the reaction which they consist?

the substitution of more than advantageous one Merch the substitution of pieces the scale is an advantageous one Merch the source of a piece of gold of the salue of the new unit I that is the pure gold in the doverign and the manifestly proper; to which the sadded in gold of the salue of the new unit I that is the pure gold in the doverign and the same and the sa

Will not this necessarily give rise to difficulty, trouble.

Will not this necessarily give rise to difficulty, trouble, and confusion?

The may certainly prove inconvenient under the Land mil system to have the decimal part always extended to the 3rd place.

52. Is it not important, with a view to the simplicity and facility in calculation which are supposed to constitute the great recommendation of a Decimal system of Coinage, that there be not more than one hundred steps between the highest and lowest monies of account?

51. Is there any country in which more than two Monres of Account are now in practical use?

of Account are now in practical use?

neyofaccount) I should say that in the present British Coinage the are three moneys of account, the £, \$, \$ d.

With some modefications such and have intimated in my reply to Quoices 12 and ing atomat money and accounts is here indicated It might be provided a precognoney of a covert denominated (100 may reproce) the dicat and in pence or hundreths of a ducat; that the values of the course the old

System in the new money of account should be as follows in . Sovereign 2. 40 Shelling 6: 12 Drowing 1, 20 Shepine 0.06

Fourpence

Tenny

It is emportant everhout doubt.

53. Is not this the case in all the principal decimal coinages now in use, ex. gr., franc and centime in France, dollar and cent in the United States, &c.?

By an Act of Congress passed in the year 1792, it was ordained that "the money of account of the "United States shall be expressed in dollars or "units, dimes or tenths, cents or hundredths, and " mils or thousandths."

Notwithstanding this long existing state of the law, we are now told, upon the authority of the Directors of the Mint, that in that country they "have but two denominations of Money of Account,—
"the dollar and cent." And further, we are told

" that below the cent they do not usually reckon " in mils or decimals, but in binary fractions of a " cent," that is, in vulgar fractions.

What inferences are to be drawn from these facts?

I believe it to be the case. The inference to be drawn is that we should seek, in any decimal system to conform, if practicable, to that which has been found decemal system to conform, of practicable to that when went found decemable by the experience of other countries. Itill other signal advantages should not be sacrificed for this end. If it be thought indispensable to preserve the Lewit, the fact that its decemalization would require a notation to the 3 places of squares in the subdivision should not be allowed to wreet the introduction of decemal langer But of, by a sacrifice of the to the domest practicative so introduces a new unit, of 100 places, the fact that in such case the subdivision will not extend in general beyond the 2nd place of decimals should have weight as an argument in favor of this plan.

- 58. And further, will there not necessarily be a less number of clean fractional parts under a system which reactives the £ sterling into one thousand mils, than under the present system, by which it is resolved into 960 farthings, inasmuch as 1,000 admits only of fifteen divisions without a remainder, whilst 960 admits of twenty-seven divisions without a remainder; and the results thus produced are again susceptible of division under the present system, but will not be so under the Decimal system; ex.gr., the eighth part of 960 is 120, which is again divisible by 2, 4, &c. without remainder; but the eighth part of 1,000 is 125, which is not susceptible of further division by 2, 4, &c. without remainder?
 - 59. In Commercial, Trading, and Banking accounts all sums less than a penny are now omitted from considerations of convenience and saving of time in account-keeping. But under a Decimal system, which divides the integer into mile, the will be an increase of 10 per cent. in the number of figures used in all such accounts. Will not accounts interfere with the brevity and simplicity of expression, and the saving of time in account-keeping which are anticipated from the
- 60. The Decimal scheme now under our consideration will retain the shilling and sixpence as fractional Coins, but will it not destroy the peculiar advantage which now attends them, namely, their convenient divisibile only by 2, 5, 10, and 25; but the same shilling, resolved by our present system into 48 farthings, is divisible by 2, 3, 4, 6, 8, 12, 16, and 24.
- for that it will deprive the lower classes of their divisors 2, 3, 4, 8, and 16, as applicable to the coins most familiar to them, thus interfering with the facility with which they now obtain the third and to the use of which they are well accustomed; whilst, on the other hand, it will give them the divisor 5, which is wholly useless as a divisor of the commodities which they purchase, or of the money which they use?
 - "A glance of the eye is sufficient to divide "material substances into successive halves, fourths, eighths, and sixteenths. A slight attention will give thirds, sixths, and twelfths." But divisions of fifth and tenth parts are among the most difficult that can be performed without the aid of calculation. Among all its conveniences the decimal division has the great disadvantage of being itself divisible only by the numbers two and five. The duodecimal division, divisible by two, three, four, and six, would offer so many advantages over it, that while the French theory was in contemplation, the question was discussed, whether the reformation of weights and measures should not be extended to the system of arithmetic itself, and whether the number twelve should not be substituted for ten as the term of the periodical return to the unit."—QUINCY ADAMS' Report, p. 71.
- the value of all the lower Coins. The penny and all multiples of the ready other than all and twelve will not be interchangeable at equivalent two lowest monies of account in the Decimal System, cents and mils, will be uninterchangeable at equivalent value with any of the present copper

Do they indicate that, be the law what it may, in Decimal Coinage more than two Monies of Account, and more than one hundred steps between the highest and the lowest unit, are found to be practically inconvenient, and, in truth, unworkable.

And further, that the broken parts of a low unit, such

as the cent in the United States and the penny in this country, are more conveniently represented by Vulgar Fractions than by Decimal notation.

Upon what other supposition can this established departure in practice from the millesimal division of the dollar distinctly laid down by the law be accounted for?

The annexed statement deserves attention; it appeared in "The Times," April 4:—

" New Orleans, March 19.
" Cotton.—Sales to-day, 3,500 bales, at an " advance of &c., the market closing firm. " New Orleans, middling, 13 tc. to 13 tc.

" Sugar has advanced &c., and sells for 10 &c., to 10+c.

Breadstuffs quiet. Pork firm. Lard advanced

" \(\frac{1}{4}c.\); kegs, \(\frac{14\frac{3}{4}c.}{2}c.\)
"Freights.—Cotton t Liverpool, \(\text{0\frac{3}{4}d.}\), and to Havre, Jc."

The broken parts of the cent are all stated in Vulgar Fractions, in opposition to the law already quoted. These fractions, \(\frac{1}{2}, \frac{3}{8}, \frac{3}{8}, \frac{7}{8}, \frac{7}{8}, \frac{7}{8}, \frac{7}{8} \tag{2} \tag{1} \tag{1} \tag{1} \tag{1} \tag{1} \tag{1} \tag{1} \tag{1} \tag{2} \tag{1} \tag{2} \tag{1} \tag{2} \tag{1} \tag{2} \tag{1} \tag{2} \tag{1} \tag{2} \tag{

In the case of a rise of \(\frac{1}{8} \) cent in cotton, this, stated decimally, must be given as a rise of '1 mil or '2 mils. There is, however, a small difference; the first is too little, the second is too much.
What must be the effect of this unavoidable difference, small per lb., when multiplied into the number of lbs. contained in 3,500 bales of cotton? What is the lesson to be derived from those con-OS siderations?

54. If with us the £ sterling be retained as the principal Money of Account, does not a subdivision into one thousand parts become unavoidable, with the addition of intermediate Monies of Account between the & and the mil?

55. Will not this constitute an important difference between the Decimal Coinage of this country and the Decimal Coinages now in use in other countries, much to the disadvantage of our Decimal system as regards simplicity and convenience of calculation, and especially of mental as distinguished from written calculation, which the middle and lower orders are constantly called upon to perform in their daily transactions?

 Under our present system is not the high value of our Integer, the \(\mathcal{L} \) sterling, a source of great convenience and advantage, especially as compared with the lower value of the franc in France and the dollar in America,-

First, as facilitating the conception in the mind of large values, and expression of them in fewer figures and with fewer words;

Second, as admitting of a greater multiplicity of clean fractional divisions?

57. By the adoption of the Decimal system will not this advantage be converted into a great inconvenience?

Will not our high Integer, by necessitating the intervention of one thousand steps between the top steps as in other countries, become the source of confusion and inconvenience, and render the adoption of the Decimal Scale in its most advantageous form impossible with us?

Lee previou

I think the franc too small a unit; but as between the L. and dollar the latter has an unquestionable superiority. It's de nather large, or the centime, which is too insigning divisibility of the L. intoclean fractional parts, so tages, as I have already previously insuled

The inconvenience of three places of decimals, though is must be partially conceded is, I think too much exaggerates; but as see no necessity of decimals, sing downward from the L. and think it would be equally if not more advantageous, to decimalize from the penny apoli a new unit, the argument here hunted I have no disposition to controvert.

I submit these questions to the consideration of my colleagues, with great diffidence as regards their incompleteness, and the mistakes which, I doubt not, will be found to be involved in them; but, at the same time, with a full assurance that they are calculated to promote that "further sifting in "public opinion" which both the Chancellor of of the Exchequer (Mr. Gladstone) and the President of the Board of Trade (Mr. Cardwell) alluded to in their remarks, quoted in our Preliminary Report. their remarks, quoted in our Preliminary Report,

their remarks, quoted in our Preliminary Report, as necessary to "secure a right understanding of "the subject by the public, without which it would "not be safe for the Government to take any "steps in regard to it."

The advantages of our present system of Coinage, the difficulties necessarily involved in a change, and the objections which may be reasonably urged to each separate system of Decimal Coinage, constitute a branch of the subject which has not perhaps been sufficiently regarded in preceding investigations. Hence these Questions, the object of which is to draw attention to considerations of which is to draw attention to considerations. Hence these Questions, the object of which is to draw attention to considerations of which is the decision of the public, or the decision of the considerations and the public of the subject of th

OVERSTONE.

April 1857.

coins, although these latter form parts in odd pence of a large proportion of existing contracts, especially amongst the lower classes, end constitute an immense proportion of the existing Coinage.

From this cause it is anticipated by some persons

that confusion and difficulty in their accounts, some unavoidable loss and injustice, and a vague but dangerous impression of more extensive injustice will arise amongst the mass of the people.

Whereas a decimal scheme founded upon the penny or the halfpenny would involve no real change in the value of any of our coins, but would only involve some additional trouble to the richer classes by giving a new numerical form to their high integer, the £ sterling, but not involving any absolute change in its value.

Do you think these apprehensions well founded, and what is your opinion of the extent and importance

of this difficulty?

- 63. Will not the advantage of the change be experienced, if at all, by the commercial and higher classes,—those who keep extensive Accounts, and enter into large Calculations,-and not by the lower classes, who usually employ the smaller coins, and are familiar principally with the penny and its multiples and subdivisions?
- 64. In connexion with the foregoing considerations, it lend any syan has been suggested that a vast majority of the than another poses, namely, adaptation to the existing division of our Weights and Measures, for distinctness of mental conception and facility of calculation in the head, our existing Coinage is better adapted than a Decimal Coinage; whilst the supposed superiority of a Decimal Coinage for purposes of written accounts and calculations is not applicable to such transactions, and would not prove beneficial to the great mass of the people with whom such transac-tions are of constant daily occurrence.

How far do these considerations constitute a just ground of objection to the introduction of a Decimal Coinage? or what reply can be made to them?

- 65. Looking to the considerations alluded to in the preceding questions, the superior facility of division possessed by 12, the further very convenient and almost unlimited facility of division arising from our peculiar mode of reckoning the ₤ integer into our peculiar mode of reckoning the \$\mathbb{L}\$ integer into shillings, pence, and farthings; the harmony which exists between our fractional Coins and our Weights and Measures, the doubtful advantages in facility of calculation to be obtained from Decimal Coins unaccompanied by Decimal Weights and Measures, and the brevity and convenience of expression, oral and written, which attaches to our present Coins;—duly weighing, on the other hand, the advantage of assimilating the progression of Coins to that of figures, the simplicity and facility in keeping Accounts and making Calculations, the saving of time in education and of labour by the substitution of simple for the proverbial inconvenience of compound arithmetic, which it is expected will arise from the introduction of Decimal Coinage;—
 - Is it on the whole prudent to make the experiment convenience be sufficiently great and fairly diffused over all the classes upon which the inconchange is neither so important nor so well ascertained as to justify the disturbance of our existing system, and of the habits and computations founded upon it?

These queries furnish arguments only against a decimal stem for Grandmitian based on the I and me altogether outweighed by the conver which might be selected. smaller money transactions in a community are man unorner someon might be selected not transactions of written account at all; that mallowing and accounts based on they arise out of Retail purchases made in the refer in the answer to query 49) the arguments he market or the shop, the calculations connected with which are necessarily performed in the head, and weight whatever, but in fact lend support to that syonage not reduced to writing. Mint of the Anited States.

Dear Sir Shiladelphia, 6th July 1857

your communication of this morning on the subject of a system of accounts in my Department with the view of determining wastage at short intervals of time, has been received & reflected on. I may state in reply that a system was tried several times in the course of the last & years, and each time abandoned as affording. unsatisfactory & very uncertain data. With the gold, it was impossible to separate the lots in consequence of its rapid influx from California, & the ungent demand of the public for payment, so that one lot had to be put in operation before the previous lot was passed through one eighth of the Refining Process. Subsequently, The change on the weight of silver coins, rendering the most rapid operations of metting & coinage necessary, the attempt to keep a reliable account of wastage at short intervals was again abandoned. In fact, it may be stated that any rapidly succeeding melting trefining operations render such systems of account very unsatisfactory, as affording no data whereby to determine actual wastage within large limits.

after there pew remarks, I reply specifically to your interrogatories

1. That such a system of approximately determining wastage within short intervals of time, if practicable, is very desirable, & its satisfactory execution would materially

the anxieties of the officer in charge of bullion, and wince his earnest endeavor to secure the interests of the government.

2. Let the present time I believe such a system is practicable with the gold, because each lot can be kept separate from the others, & its wastage approximately determined. I say approximately, because 1. The grains cannot be obtained each time from the purnace of blues; 2 because the fine sweep cannot be separated from that of the liber.

How far the system is applicable to silver I cannot now poresee, but I shall endeavor to determine it by direct trial, the main difficulty being the occasional rapid succession of deposites, & the difficulty of keeping them wholly apart in all their operations.

somewhat in the manner suggested in the communication of Mr Patterson. I propose four separate accounts-1. That of the silver bullion; 2. of the silver employed for Refining gold; 3. of the Gold which only requires melting (as fine bars from the N.Y. assay office). It. of gold which requires refining. I solicit your indulgence not to present purther details at present, but to allow me in evajunction with the assistant M. R. to develope as perfect a system by reflection spractice, as circumstances will permit.

Since we are now engaged in winding up our annual accounts, it would be obviously useless to commence the system at present, but I propose deferring the altempt until the Bullion shall have been redelivered to me.

very respectfully

Do you consider the bank absolutely solvent both in having collectible assets sufficient to pay depositors and other creditors and in its ability to meet maturing and the usual demands in the ordinary course?
If the bank is in weakened or extended condition, did you ascertain as to the possible sources of aid from shareholding interests or other connections and confer with directors about obtaining such aid?
Was a meeting had with the board of directors and all matters subject to criticism considered with them? Give names of directors and officers with whom you discussed conditions.
Did you leave a letter as instructed for the directors to sign?
What powers, if any, has the bank been authorized to exercise under Section 11k of the Federal Reserve Act? If any exercised, submit report on Form 1425-D-E-F.
GENERAL REMARKS.
(Include here criticisms and reasons therefor which the examiner does not deem advisable to state in the report proper.)
Examine
Chief Examine
To the COMPTROLLER OF THE CURRENCY,
Washington, D. C.

Note 1.—The examiner should discuss all unsatisfactory conditions with the directors, if possible, and minor matters with officers, and endeavor to have them corrected while he is in the bank, or obtain definite promises which, if sufficiently important, should be set out in a letter addressed to this office by the directors.

Note 2.—Copies of all important letters written by this office to the bank will be forwarded to the examiner, who should see that the originals and the bank's reply are noted on the minutes, where all directors will have the opportunity of being cognizant of them.

Mint of the United States.

Shiladelphia, July 8 1857

James Ross Snowden Ergr Diector de de

Sir, a interded all a month

of the 6th instant, addressed jointly to the Netter & Refiner, and myself, I am unable, after some reflection, to add any thing material to what is given in the programme of Mr. Patterson. I presume that the experience of Mr Booth will enable him to state what system will be most practicable, and how far a rigid accountability, at shortly recurring terms, is attainable.

Very much of the complication and delay which formerly embarrassed this hisiness, from the laye operations in gold, and especially in parting, is now removed; and our operations, though active and extended, are more closely confined to what may be considered legitimate minting business; at least, in the light in which such hisiness is viewed in the principal mints

of the morld.

as the Melter and Refiner constantly knows what he is charged with, and what he has sent out to the morkmen; and can easily ascertain at the close of each day's operations, what weight of hillion has been returned to his vault, it mould seem that the uncertainties are nearly narround down to the absorption and leakage of melting pots, and the usual sources of mastage. On a general rule, the weight of ingots returned, may be treated as standard meight; especially as the pumming up can only be an approximation. The practice of making daily estimates of loss, would no doubt be admonitory to the morkenen, and mork beneficially for them, whether as a Caution, or a relief.

Very Kespectfully Your lebt Gervant J. 17-6 Asfelds Assayn Im, a ssayer of mint of u.o.

In Materia to proposed Experiments

July Bo, 1857.

Phila. Inly 30th 57.

Dr. Ser:

With the view of presenting The recurrence of The difficulties experienced at my former visit to the mint, I must now repust a definite riply to my note of the 23rd int. enquiring whether you are prepared to afford me such of the facilities of the minet (fur withis by its machinery, apparaters, materials and operations) as may be necessary for executing such specimens and performing such ex--periments as may be requirite for illustra trug and testing my plan for the simprone mut of the coinage.

This request is made in consequence of your Javon of This date, an mouncing the appointment of Commissioners— whom The I have not get seen, I hope to meet at the mint this afternoon.

Very Respectly your. I.T. Barclay

Sames Hoss Inowden, Eggw. Director of the Mint at This adelphia To Newyork, July 27 th 1857 Dear Gir, We accidently read in one of the New York Tapers that the coinage of new cents is delayed for want of Nickel. Having imported this article regular, ly for the last seven years and supplied with it a large fac, tory in your neighbourhood as well as some of the Connecticut My 19 we are enabled to furnish the same at the lowest Oprices, and should be happy to contract with you for what You might want. We always imported and still now import two Kinds of Mickel which we suppose will suit Your purpose very well. The one Kind is 65% Mickel with 35% Copper and the other Rind is 98% Mickel with 2% Copper Lother matters; The one is in little lumps and the other in small Cubes both give satisfaction. The price would depend a great deal on the quantity you could order. Our present Stock is near. ly nothing and all we receive is engaged but we believe to be able to procure any quantity you might shoose to order within a reasonable Time. - Thease let us know, whether you are disposed to give a large boder and one of our firm will visit you with Samples and give you all the necessary informations as well as references so. Hoping to hear from You, we remain very Respectfully Muhlvon Reller for

he reply to your recent letter of have to state that the passeage of ord bento you refer to was deposited at the Mind on the 20th of June and will be paid for in bento of the new, issue, at the earliest practicalle day. Same Copender . Director of the Min W. S. Hays Esq.

Frederick 6:

Mod.

Muy. 0. 7.

Do you consider the bank absolutely solvent both in having collectible assets sufficient to pay depositors and other creditors and in its ability to meet maturing and the usual demands in the ordinary course?
If the bank is in weakened or extended condition, did you ascertain as to the possible sources of aid from shareholding interests or other connections and confer with directors about obtaining such aid?
Was a meeting had with the board of directors and all matters subject to criticism considered with them? Give names of directors and officers with whom you discussed conditions.
Did you leave a letter as instructed for the directors to sign?
What powers, if any, has the bank been authorized to exercise under Section 11k of the Federal Reserve Act? If any exercised, submit report on Form 1425-D-E-F.
GENERAL REMARKS.
(Include here criticisms and reasons therefor which the examiner does not deem advisable to state in the report proper.)
Examiner.
Chief Examiner.
To the COMPTROLLER OF THE CURRENCY,
Washington, D. C.

Note 1.—The examiner should discuss all unsatisfactory conditions with the directors, if possible, and minor matters with officers, and endeavor to have them corrected while he is in the bank, or obtain definite promises which, if sufficiently important, should be set out in a letter addressed to this office by the directors.

Note 2.—Copies of all important letters written by this office to the bank will be forwarded to the examiner, who should see that the originals and the bank's reply are noted on the minutes, where all directors will have the opportunity of being cognizant of them.

Dr. Sir:

Being approved by letter John the Sect of the Freasury, that a Commission has been appointed for the purpose of mustigating the month of my proposed coinage improvement, at the mint, it becomes my duty to enquine whither you have received instructions to that effect - and if so what means and facilitus you propose placing at my disposal Jon performing the necessary caperiments and executing the proposed specimens.

My Son awaits your reply.

Very Kespectfully yrs. In. It. S. J. Barcley
